

JOYCE NOH

SUMMARY

Product design engineer with an MIT mechanical engineering background and a builder's instinct for taking products from zero to launch — owning user research, CAD, vendor management, QA/QC, and go-to-market. I step into ownership gaps, build what's missing, and do my best work on mission-driven teams where I can see the user I'm helping.

EXPERIENCE

Product Design Engineer — Yondr

Los Angeles, CA

Phone-free schools & events technology

Oct. 2024 – June 2026

- Owned product direction end to end in the absence of a Head of Product — led user and market research, set critical-to-quality requirements, and presented roadmaps to leadership including the CEO.
- Built the company's QA/QC function from the ground up, authoring all destructive and RF signal-blocking test protocols and running external lab certification end to end.
- Managed manufacturing and custom-print vendors directly, owning design-for-manufacturing, supply chain, shipment timelines, and vendor-selection strategy.
- Designed mechanical components and systems in CAD (gears, locks, latching) across hard- and soft-goods lines; partnered with PMs on roadmaps, go-to-market, and competitive analysis.

Mechanical Design Engineer — Milwaukee Tool

Chicago, IL

Power tool design & analysis

Sept. 2022 – Jan. 2023

- Built a MATLAB model to predict tool mechanical stresses and forces from material and motor specs; validated via FEA in ANSYS and cut FEA runtime by several hours.
- Redesigned a prototype in NX to optimize weight, vibration, and performance, and benchmarked mechanical capabilities against competitor products to guide design decisions.

PROJECT HIGHLIGHTS

Product Designer — “Clinical Trial in a Box”, MIT M.Eng Thesis (w/ Tufts Medical Center)

2022

- Built a framework to standardize remote COVID-19 clinical-trial operations — keeping vulnerable patients out of clinics during the pandemic — and designed trial-kit packaging optimized for usability, safety, and sustainability.

System Integrator — “Sensus” Capstone, MIT 2.s009

2020

- Directed 17 MIT seniors and a \$7,000 budget to launch an alpha prototype in 3 months — an at-home screening device that helps diabetics catch peripheral neuropathy early to prevent serious complications; won the Thomas Sheridan Award for creativity in human-machine integration.

EDUCATION

Massachusetts Institute of Technology (MIT)

Cambridge, MA

M.Eng., Advanced Manufacturing & Design (2022) · B.S., Mechanical Engineering, concentration in Product Development (2021)

VENTURES & COMMUNITY

Founder & Host — “Thirty Three and a Third”, a home-cafe series

2024 – Present

- Created and run a recurring, themed community cafe — designing rotating menus and house-made syrups, building an audience, and hosting a third space where people can gather, meet someone new, or simply exist and unwind over coffee and music.

Advisory Board, Coordinator & Counselor — Camp Kesem

2018 – Present

- Support free summer camps for children whose parents are facing cancer — serving as a camp counselor, sitting on the DePaul chapter advisory board, and planning “Make the Magic,” the chapter's largest gala, which raised \$75K in one night.

Co-Chair — MIT Alumni Class Reunion Committees (Pi & Tau Reunions)

2023 – Present

- Co-led a 13-person committee to plan and deliver a multi-day class reunion for hundreds of alumni — directing finance, events, and marketing sub-teams, managing vendors and venues, and designing the class brand.
- Re-invited to co-chair the next reunion, now leading a 15-person cross-class committee in coordination with the MIT Alumni Association.

SKILLS

Product & Design: User & market research, product roadmapping, go-to-market, QA/QC, DFM, vendor & supply-chain management, competitive analysis, user-centered design, prototyping

Technical: SolidWorks, Fusion, NX, ANSYS (FEA), MATLAB, Python, Arduino, Figma, Illustrator/Photoshop, 3D printing, laser cutting, RF & destructive testing

Languages: English (Native), Korean & Spanish (Proficient), Japanese (Beginner)
